

Jersey Boot

One of the most innovative and versatile forcible entry tools. The Jersey Boot's Military-spec steel and castings are the same alloys that are used on nuclear submarines, and are forged in the same foundry, in the USA. Use as a conventional ram for inward swinging doors. Use as a pry to open outward swinging doors. Use as a door chock to seal off doors preventing entry or exit. Break and rake windows, wallboard, or other materials. Extra weight eliminates the need for the operator to take a big swing. Great for confined areas. The Jersey Boot is now available in fire engine red or fire engine lime-yellow.
