

THE JERSEY BOOT

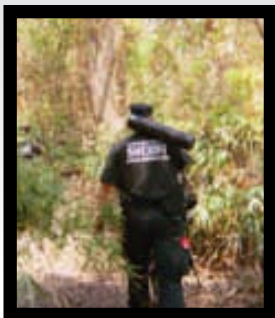

The next generation of manual breaching is here. Never again will you be forced to carry heavy packs with multiple tools you don't need. Never again will you have to search for operators carrying single use tools in order to breach a door, window or lock. Why fill up your vehicles with many different single use tools when...

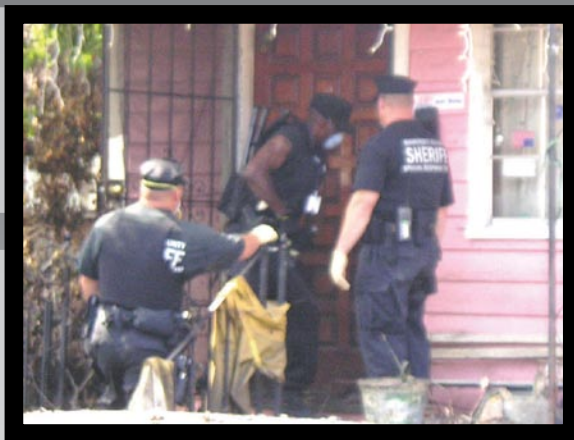

The Jersey Boot Does Everything!

Over two years of research and development went into creating one of the most innovative and versatile breaching tools. While it may look easy to duplicate this patent pending device, it would be virtually impossible with inferior materials.

Military spec steel and castings are the same alloys that are used on nuclear submarines, forged in the same foundry, In the USA!

**Tired of being stuck carrying the wrong tool in the wrong place?
The Jersey Boot is the Answer!**

New Orleans, LA/ Hurricane Katrina

100 degree heat, searching for survivors, now is not the time to realize you have been carrying a 50 pound pack full of ineffective breaching tools! Now you can carry just the Jersey Boot.

Don't Just Buy One!

The Boot was engineered to work with existing breaching tools, (sledges and pry bars), but works best with another Boot. Teams should have many! Deploy with Breachers. Entry teams can pick up one for a diversion or break & rake or give to any officer for any function.

Diversification

Emergency response vehicles and patrol cars need the Jersey Boot for quick reliable emergency extractions.

THE JERSEY BOOT

Multi-Purpose Breaching/Rescue Tool

The Jersey Boot Does Everything!

Tired of carrying a 50 lb breaching pack and 35 lb ram for hours on operations? The Jersey boot replaces all breaching tools and only weighs 24.5 pounds!

Inward Swinging Door

Use as a conventional ram/a larger sweet spot enables operator to deliver more kinetic energy vertically along jamb, between locks without the risk of penetrating door.

Height Differential Ram

Allows operator to make up 8 inches of height by using bottom handle. This enables a higher strike without causing injury to operator.

CQB Ram

Best close quarters breaching tool on the market.

Outward Swinging Door

Use as a pry bar to pry open virtually any door including Class 3 Steel door enclosed in block or concrete.

Break & Rake

Safely and effectively break and rake windows, wall board or other materials. Extra weight eliminates the need for the operator to take a big swing. Great for confined areas.

Lock Busting

Can break through almost any padlock, including extra heavy duty hardened steel.

Sledge

Use to set another boot, break locks or any other sledge operation.

Door Chock

Seal off doors to prevent entry or exit.

Step

Need that extra boost, don't step on an operator, step on the Jersey Boot. Great for porting windows.

Diversion

Don't risk operators lives with breaking and raking, Throw the Boot through the window or door for diversion, to breach or to clear the path for a bang.
